PERFORMANCE OF RIG IRI-1700 WITH OGDCL

M/s EXALO (Cracow) rig IRI-1700 has been operating with OGDCL for last almost 10 years. The rig has drilled successfully several vertical, slant and horizontal wells with more than 89⁰ angle for OGDCL. It has also completed extended reach wells in Qadirpur area. The rig had drilled wells to the maximum depth of more than 4000M.

Performance of the rig remained excellent during entire contract period with minimum down time and many of the wells were completed before the planned schedule. The rig crew is skilled and efficient enough to minimize the mobilization and rig up time.
